To Mr Steven Watson
Humitech Singapore Pte Ltd

When I was told that Humitech Pte Ltd Company wanted to install their humidity control system at my outlet for a 2 weeks trial run. My first thought was that this must be the product that can help us reduce condensation or moisture in the walk-in chiller.

Most of the reach-in and walk-in fridges in our restaurant kitchen somehow have strong odours. Condensation in the walk-in chiller are quite normal to us because we handle a lot of culinary students. Thus the walk-in chiller is open very frequently causing it to condensate. Due to this movement, some air-flown vegetables, vegetables, fruits, meats, fish are easily deteriorated.

After the 2 weeks trial run, all my fridges and walk-in chillers seem to be colder and more consistent in temperature. The products are drier and very little condensation is found in the walk-in chiller. The unpleasant odours somehow have been reduced quite a lot. Most importantly, the perishable products have prolonged their shelf life longer than expected.

As the chef of Rosette Restaurant, Manager of Food Preparation (Operations) of College of Culinary Arts @ Shatec, I would strongly recommend these products to any food establishment.

Eric Chiam
